STORKØKKEN®

god service gør forskellen - før, under, efter

AT CHURCHILL, WE KNOW THAT FOOD SAFETY HAS ALWAYS BEEN A TOP PRIORITY FOR THE HOSPITALITY INDUSTRY. OUR COMMITMENT TO SUPPORTING FOOD SAFETY REMAINS OF HIGH IMPORTANCE TO US.

We blend centuries of experience with cutting edge technology and design innovation to produce one of the strongest ceramic bodies in the world.

Choosing our vitrified ceramic products, each with a hard-wearing superior glaze and edge chip resistance, helps to support food safety.

The perfect blend of science, expertise and engineering. Churchill products are engineered to perform, to protect and to last.

FOOD SAFETY

VITRIFICATION & FIRING

SUPPORTING
FOOD SAFETY

100% of Churchill's ceramics are vitrified which is essential to the hospitality industry. Vitrification is a process where we physically change the clay, melting it to make our ceramics impervious to water. Supporting food safety, bacteria has less opportunity to penetrate into the ceramic and grow.

VITRIFICATION

Through the process of vitrification, the particle structure of our ceramic body becomes strong, dense and watertight, limiting bacteria from penetrating into the ceramic. Vitrification also aids durability, as breakages in ceramics are generally related to porosity, or how much water a piece can absorb. Water absorption weakens the physical structure affecting its durability over time.

VITRIFICATION TESTING

We test the vitrification of our product everyday, both in the kilns during firing and in our laboratory when the manufacturing process is complete.

DID YOU KNOW?

Our ceramics are impervious to water. This means that bacteria has less opportunity to penetrate into the ceramic and grow.

DID YOU KNOW?

Through the process of vitrification the particle structure of our ceramic body becomes strong, dense and watertight.

WATER ABSORBENCY TEST

CHURCHILL

VITRIFIED PRODUCT

0.4% WATER ABSORBENCY

SUPPORTING
FOOD SAFETY

Churchill vitrified products have a water absorbency of 0.4% or less*, compared to a domestic product which has the potential to absorb up to 15%.

DOMESTIC PRODUCT

UP TO 15% WATER ABSORBENCY

*when tested in accordance with BS 4034

ENGINEERED SHAPE & FORM

Every piece of Churchill's ceramic is designed with performance in mind. Through expert shape engineering, we reinforce strength and durability while continual investment in technology guarantees functionality and consistent quality.

SUPPORTING
FOOD SAFETY

FULLY GLAZED BASE

Whilst our fully glazed base adds complexity to our manufacturing process, it has been engineered to provide additional benefits to our customers. Distributing the weight more evenly when the product is stacked can reduce the possibility of scratching the glaze surface and becoming a potential entry-point for bacteria.

EDGE CHIP RESISTANCE

We understand the importance of edge chip resistance and engineer our products to perform in the busiest environments. Strengthening impact areas and adding a rolled edge improves edge chip resistance.

DID YOU KNOW?

Our fully glazed base can reduce surface scratching when the product is stacked, limiting the potential to become an entry-point for bacteria.

RESISTANCE

FULLY GLAZED BASE

SUPPORTING
FOOD SAFETY

A more even distribution of pressure when products are stacked helps to reduce the possibility of scratching the glaze surface and becoming a potential entry-point for bacteria.

CHURCHILL

CHURCHILL DINNER PLATE
WITH A GLAZED BASE

The exposed biscuit foot applies a more concentrated pressure when products are stacked, which may result in scratching. The glaze surface then has the potential to become an entry-point for bacteria.

DINNER PLATE
WITH AN UNGLAZED FOOT

GLAZING

Our glaze is hard wearing and designed specifically for the hospitality environment. The durability is a combination of the glaze recipe, the firing temperature and substrate.

SUPPORTING
FOOD SAFETY

DID YOU KNOW?

Our glaze surface is suitable for use with alkaline sanitisers and tested to withstand 5000 industrial dishwasher cycles.

HIGH PERFORMANCE GLAZE

Our products have been designed to support cleaning and sanitising processes, a crucial element to ensure food safety. A two step process, cleaning is carried out to physically remove bacteria and dirt from surfaces, followed by a sanitising process which is designed to kill bacteria to a safe level.

CLEANING

- Churchill products have a hard wearing glaze, designed to withstand 5000 dishwasher cycles.
- The hardness of our glaze allows the product to be vigorously cleaned or scrubbed using tough non-metallic utensils.

SANITISING

- The glaze surface is highly suitable for use with alkaline sanitisers.
- Our glaze is stable under UV light.
- Churchill products can be washed/sterilised using boiling or steaming processes.

BRITISH STANDARD
MECHANICAL DISHWASHER RESISTANCE

DID YOU KNOW?

Churchill glazes are uniquely formulated and applied to reduce the surface roughness of our ceramics, which lowers the available sites that bacteria are able to adhere to, and this in turn reduces the amount of bacteria that is able to grow on the surface.

QUALITY & CONFORMANCE

Churchill ceramics are continuously tested and quality checked, from the stage of raw materials, throughout the manufacturing process to the final fired piece.

FOOD SAFETY

SUPPORTING
FOOD SAFETY

Churchill vitrified ceramics conform to the following standards:

VITRIFICATION AND FIRING

- **BS EN 4034** British Standard European Approved Vitrified Hotelware
- **BS EN 1217:1998** British Standard European Approved Water Absorption

ENGINEERED SHAPE AND FORM

- **BS EN 12980** British Standard European Approved Determination Of Impact Resistance
- **ASTM C368** International Standard Impact Resistance Of Ceramic Tableware

GLAZING

- **EN 13258** European Standard Craze Resistance Of Ceramic Articles
- **BS 12875** British Standard European Approved Mechanical Dishwasher Resistance
- **BS EN 1183:1997** British Standard European Approved Thermal Shock and Thermal Shock Endurance

FOOD SAFETY

- **BS EN 8654:2015** British Standard European Approved Hospitality Ceramic Tableware Intended For Contact With Food
- **BS EN 15284** British Standard European Approved Resistance To Microwave Heating
- **ASTM C927-80** International Standard Lip And Rim Metal Release
- **United States of America Federal Standards** FDA Compliant
